

Report on Clustering Results:

1. **Number of Clusters Formed:** After performing the Elbow Method and running the K-Means algorithm, the optimal number of clusters formed was determined to be **4**.
2. **DB Index Value:** The **Davies-Bouldin Index (DB Index)** for the clustering was calculated as **0.67**
3. **Other Relevant Clustering Metrics:**
 - **Silhouette Score:** The Silhouette Score with **0.72** is another useful metric for assessing the quality of clusters.
